

Harsh Saliya

Software Engineer — Backend & Retrieval Systems

About

Backend is where I do my best thinking. I'm a Software Engineer with 2 years building backend systems in Django, PostgreSQL and AWS Lambda. I design the data model, the API surface and the pipeline that feeds them, then tune the whole thing until it holds up under real load.

Lately that's extended into retrieval. I build RAG pipelines on Qdrant and pgvector that route a plain-English question to either vector search or generated SQL — so PDFs and spreadsheets can answer for themselves.

My day job is fintech: REST APIs for lending and transaction workflows, ETL pipelines on AWS Glue, invoice and revenue automation, and PostgreSQL queries tuned with indexing and join strategy until slow endpoints run 80–90% faster.

Skills

Languages: Python, SQL

Backend: Django, Django REST Framework, REST API Design, Serverless Architecture

Databases: PostgreSQL, MongoDB, SQLite3, Qdrant, pgvector

AWS & Cloud: AWS Lambda, API Gateway, Amazon S3, AWS Glue, CloudWatch

AI / Retrieval: RAG, LangChain, Embeddings

Tooling: Docker, Git, GitHub, Postman

Operating Systems: Linux, Windows

Experience

Software Engineer — Lambda Logs

Jan 2025 – Present (Internship: Jan 2025 – Apr 2025 · Full-time: Apr 2025 – Present)

Project: MoneyClub

- Built REST APIs on AWS Lambda and API Gateway for lending and transaction workflows.
- Refactored logic and tuned PostgreSQL queries, cutting response times on slow endpoints by around 60%.
- Automated invoice generation and daily revenue reporting with AWS Glue ETL pipelines.
- Migrated legacy PHP modules to Python/Django, keeping loans, repayments and transactions consistent in production.

Project: HRMS

- Built a complete HRMS backend covering employees, payroll and leave.
- Designed and implemented REST APIs end-to-end in Django REST Framework with PostgreSQL.
- Handled role-based permissions so admin, HR and employee each get their own level of access.
- Kept clean architecture throughout — structured model design, serializers and migrations stayed maintainable as the system grew.

Projects

DocsAi — Document Q&A RAG system

github.com/HarshSaliya/DocsAI

- Flask backend with a Streamlit frontend for question-answering over uploaded documents.
- Qdrant for vector search and sentence-transformers for embeddings, with the Groq API handling generation.

CareerGo — Job Portal

College project · Django

- Job seekers can browse listings and apply; companies and HR can post openings.
- ATS-style resume scoring to screen applicants against job requirements.

Travello — Travel Package Booking

College project · Django

- Users can browse and book travel packages end-to-end.

Education

Master of Computer Applications (MCA) — LJ University

2023 – 2025

Bachelor of Computer Applications (BCA) — Gujarat University, Ahmedabad

2020 – 2023
